Unattended Motion Test with EBrake

- 1) Set parameter 74 to 0, to disable a BrakeSW error,
- 2) Place controller level at a floor on INDEPENDENT SERVICE, this will hold **both** the Hall and Car doors open.
- 3) Remove wires from Terminals #81 & #82, so car will not Relevel.
- 4) Push in relays BR and PB/PBX. This will release both brakes.
The car should drift out of the door zone with the doors open, tripping the EBrake and causing a "ROPEGrp/EmBrkTrp_UAM" Error.
- 5) To reset, toggle the controller from "Automatic" to Controller Inspection.
- 6) Set parameter 74 to back to it's original setting.
